

Narciso Núñez

Founding Engineer · Backend & Platform

me@narcisonunez.com · narcisonunez.com · github.com/narcisonunez · linkedin.com/in/narcisonunez/

Dominican Republic · Remote · UTC-4 (overlaps US Eastern and Pacific)

Founding engineer at Dokploy, the open-source alternative to Vercel, Netlify and Heroku (37k+ GitHub stars, 360+ contributors), where I own the open-source and community side of the product. Fifteen years across backend and platform engineering. Most recently three years in fintech at Every (YC S23), where I owned the treasury and investments surface, and before that CTO of a distributed health-tech product team. I do my best work early, close to the product and the people using it.

EXPERIENCE

Dokploy

Jul 2026 – Present

Remote

Dokploy is an open-source, self-hostable PaaS positioned as the alternative to Vercel, Netlify and Heroku. It has 37k+ GitHub stars, 2.9k forks and 360+ contributors.

Founding Engineer

- First engineering hire, working directly with the founder; I own the open-source product and its community surface while the founder covers enterprise.
- Shipped Docker Health, a monitoring surface for Docker and the host-level OS conditions that silently break deployments. It is now used daily by the community and gets called out by enterprise customers on calls.
- Shipped Overview, a global dashboard that aggregates services, backups and deployments across every project, replacing per-project drill-down.
- Provide direct technical support to Dokploy's largest accounts; that support has converted 2–3 new paying customers since I joined.
- Handle triage, review and release across a 360+ contributor community on a TypeScript, Docker Swarm and Traefik stack.

Every, Inc.

May 2023 – Jul 2026

Remote (US Pacific hours)

Every (YC S23, ~\$32M raised from Y Combinator, Redpoint and Base10) is the all-in-one back office for startups: incorporation, banking, payroll and bookkeeping, used by 1,000+ companies.

Senior Software Engineer

- Took Every's treasury and investments product from a thin first version to a surface I owned end to end: positions, trades, transfers and reporting on top of a third-party brokerage API, backing US Treasury Bill investing through an Every Securities account at BNY Pershing.
- Became the de facto technical owner of treasury: every ticket, design question and escalation in the area routed through me without any formal handoff.
- Trusted to execute multi-million-dollar customer transfers directly against the brokerage API for flows the product did not yet expose, while the self-serve path was being built.
- Owned the banking and brokerage integrations behind the product (Plaid for account data, Unit for banking, a third-party brokerage for investments), moving millions of dollars in customer funds, including Every's own venture round, which was held in the accounts those integrations managed.
- Built 20+ Retool internal tools used daily across engineering, operations, finance and accounting, enough that 'the Retool guy' became my internal title.
- Built a dedicated version of the incorporation tooling used directly by the company's investors to review portfolio companies and their formation documents.

TashiPro

Aug 2020 – Apr 2023

Remote

TashiPro was a corporate health and wellness platform: coaching, nutrition and fitness mentoring with health tracking and analytics, sold to US employers looking to lower their health-insurance costs.

Director of Development / CTO

Dec 2022 – Apr 2023

- Promoted to CTO after ~2.5 years and two prior leadership roles; reported directly to the CEO and owned engineering for the entire product.
- Grew engineering from 8 to 15 people across the Dominican Republic, Spain, India and Pakistan, serving US-based clients.
- Led the platform migration off 18 loosely-coupled Node repositories and CloudFormation onto a TypeScript Nx monorepo with Pulumi-managed infrastructure; V1 was running end to end within 8 months.
- Diagnosed the release coupling behind recurring 5xx errors: every repo shipped its own UI and API, so deploys had to be hand-sequenced. The monorepo removed the ordering problem outright.

TypeScript · Node.js · Nx · Pulumi · Next.js · React · AWS

Backend Team Lead

Aug 2021 – Nov 2022

- Led the backend team across four countries (Dominican Republic, Spain, India and Pakistan) on a serverless AWS architecture defined with the SAM framework.
- Owned the service architecture behind the product: Lambda, API Gateway, DynamoDB, SQS/SNS, Cognito and Redshift.

Senior Software Engineer / Team Lead

Aug 2020 – Jul 2021

- Joined as a senior IC and moved into team leadership within a year, planning capacity against budget and milestones, mentoring developers, and acting as the technical voice in client meetings.

CreateApe

Jan 2022 – Feb 2023

Remote

Product design and development agency. I joined as a contract developer and was promoted to lead the whole engineering org, which I ran alongside my role at TashiPro.

Director of Development

- Directed a 17-engineer team across multiple concurrent client engagements on WordPress and Laravel.
- Owned client-facing technical conversations directly, with no PM layer translating. That was the part clients consistently asked to keep.
- Scoped incoming requirements, selected the stack for each engagement, and built the estimation and delivery processes the leadership team ran on.

Vivial

Jan 2018 – Apr 2020

Dominican Republic

Software Engineer

- Became the informal owner of the platform's social integrations: Facebook, Facebook Ads and Twitter.
- Co-authored the company's replacement LinkedIn PHP SDK after Microsoft's acquisition of LinkedIn broke the existing API.

Theorem

Jan 2017 – Jan 2018

Dominican Republic

Senior Backend Developer

- Built and led development of Everest, the internal platform used company-wide by 60–100 people to run production and client workflows.

SKILLS

LANGUAGES & RUNTIME	TypeScript · JavaScript · Node.js · Go · PHP
BACKEND & DATA	GraphQL · Hasura · PostgreSQL · MySQL · Redshift · MongoDB · Redis
INFRASTRUCTURE	Docker · Docker Swarm · Traefik · AWS · Terraform · Pulumi · Nx · CI/CD · Bash
FRONTEND	React · Next.js · Vue

EDUCATION

BSc, Computer Science Universidad Autónoma de Santo Domingo

2011 – 2016

Amin Abel Award (2013), the university's highest student distinction.

Linux System Administration / Oracle DBA Fundación Código Libre Dominicana

2013

LANGUAGES Spanish (Native) · English (Professional working proficiency)
